LibraryList

```
classDiagram
    class EntityList {
        # $entities
        + __construct()
        + add()
        + remove()
        + removeAt()
        + get()
        + tryGet()
        + getIterator()
        + load()
        + save()
        + markAllAsDeleted()
        + markAllAsUpdated()
        + delete()
        + setValue()
        + setValues()
        + getByKeyValue()
        + getValue()
        + getValues()
        + getEntities()
        + find()
        + getTotal()
        + getTypes()
        + getTableName()
        + getPrimaryKeys()
        + getColumns()
        + getType()
        # buildSelectionQuery()
    }
    class LibraryList
    LibraryList --|> EntityList
```

The diagram shows a class hierarchy where LibraryList inherits from EntityList. EntityList is the base class with a large list of public and protected methods. LibraryList is a subclass, represented by a gray box with three empty compartments below the class name.
